

INTELLIGENT MANAGEMENT OF COMMERCIAL
BUILDING PRODUCT DATA THROUGH A
CLOUD-BASED PLATFORM

Jerry Freeman, President

> 30%
of specifications are wrong.

Today, building designs begin with bad product data.

The construction industry suffers from siloed product data, manual workflows, and antiquated processes that unnecessarily cost billions of dollars each year.

90%
of projects don't closeout on time.

In the commercial construction industry, \$31B is unnecessarily spent each year in rework and miscommunication due to siloed product data, manual workflows and antiquated processes.

Transparency to proper product information causes each person in the process to waste 14+ hours a week in rework

Spec-ID is a fully integrated product management platform that utilizes automation and more accurate product data to reduce risk, cost, and rework on every job.

Key Features / How It Works

Customer seeks to avoid wasting money on rework from bad data and manual processes

Validate product information in minutes
accurate real time data automatically

Integrate your current system with Spec-ID
Estimating, ERP, and general contractor management

Create your technical docs with ease fast
all the needed data and documentation in one place

Customer payment

Customers mitigate risk and get jobs done faster with more accuracy
