

Maximizing Performance and Productivity

Maximizing Performance and Productivity

- **How old are your workstations?** 3-5 year life Cycle
- **How old is your server?** 3-5 Year life Cycle
- **How well are your servers and workstations maintained by your IT Firm?** Clear System temps, Caches, Monitoring Hard Drive Space.
- **SSD Hard Drives vs HDD Hard Drives:** SSD 20% faster less than 1/2% failure rate
- **How often do you restart your computers?** Recommended once a week for a workstation Once a Month for servers
- **Are you excluding FileMaker applications from your Anti-Virus live scans:** Scanning open Database files affects performance
- **How much memory do your workstations have?** 4-8 GB
- **How fast is your Wireless and Wired Network?** 1 gbps. A network is only as fast as its weakest link.
- **Are you monitoring the amount of traffic on your network?** Limit the amount of Music Streaming, and YouTubing on your network.
- **Remote Access speed:** The upload speed is the Key
- **Dual Monitors:** Twice the Productivity

Maximizing Security

Colonial Pipeline Company

Maximizing Security

- **Make sure you workstations and servers are updated with the latest security packs**
- **Run your AntiVirus and please make sure FileMaker is a part of the exclusion list**
- **Use Secure remote access methods were you do not have to open vulnerable ports on your firewall**
- **We recommend a fast performing VPN for additional security**
- **Backup, Backup, Backup**
- **Be careful what you click on**
