

Cloud Storage

The future of system attachments

Cloud Storage

Why Cloud Storage

- Reduce system overhead from 3rd party attachments.
- Moving data around (to new server) is easier.
- Server crashes do not affect these files.
- Performance is reduced when drives space gets low.

Cloud Storage Benefits

- Select these attachments to the system sent emails.
- Encryption keeps files private.
- System update speeds will be exponentially faster.
- Attach any file type.

This is the Future

- We will be migrating clients to this new storage platform.
- You will be notified about this migration and how to prepare for it.
- All attachments will be stored in this cloud repository.
- Legacy attachments will gradually upload in nightly batches.
